

TeamTalk Consulting

- Sells Interactive Voting Systems
- Provides an Interactive Voting service and
- Also rents additional equipment when users need extra equipment.

Reply Voting Keypads

The Plus System – Now with 140 character SMS style text messaging. The multi digit entry keypad with the high end features normally found at a higher price. The Static/Dynamic capability addressing capability is unique to Reply Plus, and the multi-digit entry capability makes logging-on by individual users easy and simple. The LCD screen on the Plus keypad allows information on choices made to be viewed before sending, and the viewing messages from the central unit. It also shows battery level in the keypad, signal strength, keypad address number and channel number.

The Mini+ (or Mini Plus) System. The little sister of the Plus keypad with all of the multi-digit capability of the Plus keypad and most of the other features. The Mini Plus runs the same voting software as the Plus system and uses the same base stations.

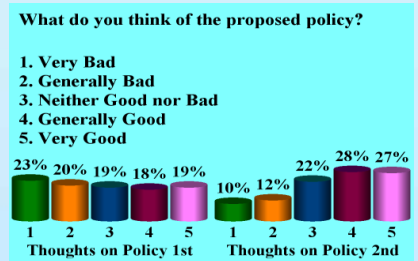

The WW (or Worldwide) System. A simple to use single digit entry keypad that is the largest selling keypad of the Reply range.

The Mini System. The 5 button version of the WW keypad that uses the same base station and software as the WW system.

Item	£	US\$
Plus	66.69	99.95
Mini Plus	33.99	49.95
USB Base	263.99	395.00
Large Base	463.99	695.00
Worldwide	39.99	59.95
Mini	23.99	34.95
Base	263.99	395.00

The Reply Voting Software Applications.

The Reply voting system has multiple voting software applications available to cover almost all voting needs. Most other voting keypad systems have only one.

PowerPoint compatible software applications give a voting capability to PowerPoint presentations and the foremost Reply PowerPoint voting software is Powercom (From £730.00 or US\$1,095.00).

Stand-Alone voting software applications do not use PowerPoint and are combined voting and presentation software applications in their own right. They are usually far more flexible in use than PowerPoint voting software and the best of these are Unity, Synthesis (From £730.00 or US\$1,095.00), and wInquiry (£3,340.00 or US\$5,000.00).

Specialist voting software applications include consulting tools such as Ballot, which has gained traction in the Risk Management area and specialist market research tools such as M2M which can be used for the Market Research of adverts and broadcasts.

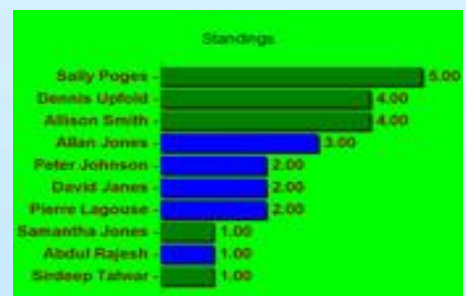

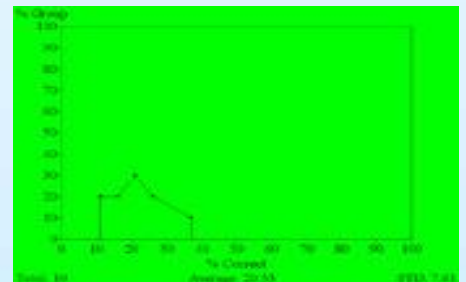

Uses and Benefits of using Audience Response Systems.

Audience Response systems are primarily data collection tools that allow the gathering of data from any number of people in a meeting, safely and anonymously in a speedy manner. It is the discussion that can be generated around the results that gives audience response systems their edge.

Areas where interactive voting systems can improve performance include:

- Public Consultation Meetings
- Interactive Conferences, Seminars and Exhibitions
- Delegate and Shareholder Meetings
- Classroom Training and Education events
- Group Decision Support and Strategic Planning meetings
- Risk Management Workshops
- Focus Group Research
- Employee Surveys
- Advertising Testing
- Opinion Analysis and Political Polling
- TV Game Shows and Special Events
- Assessment and Auditing
- Multi-Site conferences
- and many more.

Audience Response Services

We can provide a number of audience response related services.

Basic Service: We can provide the basic service where we operate the voting system when and where you need it. This service is usually provided through an AV company or conference organiser. You send us the questions with any pictures or backdrops that you want to incorporate, we programme the voting system, we set up and rehearse and then we operate it on the day.

Advanced Service: We can also provide a proper facilitated service where we use highly skilled facilitators to take your group through the complex issues that they are using the interactive voting system to help resolve. Such issues could involve Option Setting, Action Prioritising, Risk Management Analysis and many others.
